Dear Members of the Planning Board

Thank you for taking the time to consider our concerns and comments with respect to this project.

While we understand the need to attract businesses to help to minimize taxes on residences, we believe it is equally important to make sure that the costs of approving a project in the long term do not exceed the benefits.

Reports that have been made available to the engineers for the City of Middletown do not sufficiently address concerns regarding major issues regarding stormwater systems, pollutant loads and other significant impacts.

Our communities will be left with the burden of the impact of these unaddressed issues at significant financial and health costs to residents. It is not unreasonable to require these issues to be demonstrably addressed before any permits are issued.

Thank you for your consideration.

Sincerely,

Mike Haines
