Date: Thursday, July 14, 2022 9:29:56 AM

I am deeply concerned about this project and its detrimental impact it will have on our local area and community at large. The environmental impact of this project is unacceptable and would cause significantly increased air pollution and traffic and noise. The increase of greenhouse gasses is exactly what we do not need at this point when we see the reality of climate change all around us. As a new resident to Middletown I am so excited to see the positive changes in the area. This project would adversely affect the residents of Middletown with severely impacted environmental issues and reduce the quality of life for all. - I also understand there are issues of protected wetlands and there is archaeological significance to the proposed site. I can not state loudly and clearly enough that this project must not go forward.

I urge you to find a better way and stop this project from going forward.

Respectfully submitted,

Gail Rivkin Green
